Landscape Edging Systems

Landscape Edging Systems

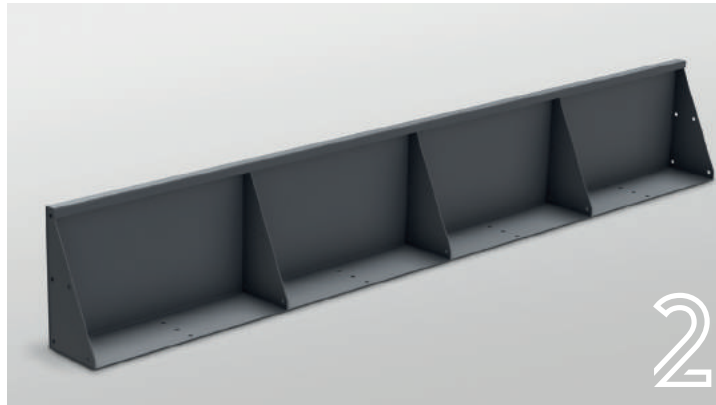

Outdoor Design offer a complete range of versatile, cost-effective metal edging systems, plus fully bespoke options, designed and manufactured entirely in-house for landscaping applications from simple lawn edging to heavy-duty structural retention.

SERIES 1 LANDSCAPE EDGING

Primarily for path and lawn edging, the 3mm thick Series 1 features a plain top edge pinned in place.

SERIES 2 LANDSCAPE EDGING

The heavier-duty Series 2, also 3mm thick, uses a continuous base plate section bolted to a concrete foundation with gusset plates equally spaced.

SERIES 3 LANDSCAPE EDGING

Series 3, again bolted to a concrete foundation with gusset and base plates equally spaced is available in thicknesses from 5mm to 10mm.

All can be supplied in a range of materials and finishes including powder-coated mild steel, corten steel, galvanised steel and stainless steel, in a range of heights, and lengths up to 2.5 metres, providing a quick, simple and cost-effective solution.

Landscape Edging – Bespoke Solutions

We also offer a completely bespoke service, with every aspect designed and manufactured to your exact requirements, including the height, finish and top edge style. We'll design and manufacture your edging and its supporting structure in the most appropriate material at the correct thickness for the specific setting and application. Through our in-house design capabilities and state-of-the-art cutting, folding and welding technology, we can create solutions for complex schemes and challenging locations, and deliver perfect results no other supplier can achieve.

Call us today on 01903 716960 for advice, information and a quote on your upcoming landscape edging project.
